As to claim 1, the prior art as taught by Birsan et al (US 6,848,078 B1), Graunke et al (US. 5,852,826) and Ehab (A Survey of Event Filtering Mechanisms for Dynamic Multi-point Applications) do not teach on render obvious the limitations recited in claim 1 when taken in the context of the claims as a whole, determining that a second node at a topmost level of the second filtering tree is also an OR node; in response to determining that an OR node is at the topmost level of each of the first and second filtering trees, creating a single output filtering tree and storing it on computer readable storage media, the single output filtering tree providing a resulting OR node at a topmost level of the output filtering tree and adding each child not of the first tree of the second tree into the single output filtering tree as child nodes as recited in the independent claim 1. Moreover, evidence for modifying the prior art teachings by one of ordinary skill level in the art was not uncovered so as to result in the invention as recited in claim 1.
